**Sun Clay Air Hardening Clay**

**No need for firing, dries hard!**

*Red or White available*

Safe, multi-purpose and economical. Great for modelling, throwing, sculpting and hobby projects.

Dries leather hard in 24 hours and rock hard within several days (actual drying time varies with temperature, humidity and thickness of clay).

Decorate with acrylic paints. Must be sealed with a commercial water sealant to be water resistant.

Graffito works exactly like carbon paper. The Graffito sheets are embedded with a ceramic underglaze that will transfer to bisqueware when drawn upon using a stylus, ballpoint pen or pencil. This means that any image or photograph can be transferred to your ceramic piece. However, unlike carbon paper, Graffito colours remain after firing.

Graffito is designed to be put only on bisqueware. The pressure of the pencil/pen may indent the clay if it is used on greenware or leather hard clay. The medium is ideally suited for flat items like tiles, plates and trivets.

All colours except Pink (cone 06 to 4) can be fired from cone 06 to cone 8. Each sheet is a 23cm square.

**Available in 12 colours**

**\$8.50/ sheet**

Black Blue Brown Green Pink Teal Orange

Red Violet Turquoise White Yellow

**Plain carbon tracing paper sheets also available \$1.50 / sheet**

Use to draw patterns onto clay that wont repel colours and will burn away after firing.

Great for 'paint by numbers' style decorating on bisqueware.

# TRANSFER PAPERS (IMPORTED)

Works on all stages of clay! (soft, medium, leather hard, bone dry and bisque)

Temperature Range: Cone 06-10. Zinc-free Clear Glaze Recommended.

## RAKU

Mayco Raku glazes are designed to develop beautiful metallic lusters and crackle patterns when fired according to raku firing processes.

**MRAKU \$39.20 each**

COPPER PENNY

PEACOCK MATTE

OIL SLICK

Do not glaze inside or bottom of ware. Thinner coats tend to produce greater metallic effects. Fire to cone 06 (1010°C) and hold for 5 minutes. Remove ware from kiln with tongs. Place ware into metal lidded container with combustible materials. Place lid on immediately to reduce oxygen. The combustible materials will produce flames and smoke. Leave in container until cool, approximately 20 minutes and remove. After ware has completely cooled use water and a scouring pad to clean; cleaning will improve the lustre and colours in the fired finish. Actual fired results will vary according to choice of clay.

Cobblestones create a textured “cobbled” surface when fired. Apply over another glaze and during the firing process, a shattered pattern of raised, irregular chips will emerge. The underlying glaze will appear in the cracks.

Special Effects glaze in combination with Turquoise gloss glaze on Cone 6 White

## BME110 Speckled Medium

Want to enhance your pieces? Add a teaspoon of speckle to ANY glaze to instantly give you that wow factor!

You control the process - add 5 to 10ml to 500mls of Glaze to achieve your desired results.

Fired results will vary according to Fired Temperature.

Fire glaze to recommended temperature - 1080°C - 1280°C.

### DID YOU KNOW?

BMG190 Special Effects is not a stand alone glaze. It is applied under another glaze to give a microcrystalline appearance.

Not suitable for use with Cadmium based glazes.

**Please note: For extensive 1280°C/stoneware, we can supply K6 as 240V-25amp, for extended operating life of elements, requires direct wiring or 30 amp plug top and lead (not supplied).**

**It is recommended that circuit breakers or fuses and electrical cables are rated at a minimum of 20% above the required amperage of the unit.**

**Three phase kilns are 5 wire – 1 earth, 1 neutral, 3 actives.**

**Note: We can manufacture quite a number of 2 and 3 phase kilns as single phase if you have adequate single phase power available. The same may also be done with the multi-sided octagonal kilns.**

<b>SCS</b>	Standard Cone Stand 3 Hole	4.90	-

**The Three Cone System**

While a single cone may be used on a shelf to “witness” the firing, it is recommended to use three different cones.

The group consists of a Firing Cone - the desired cone for the ware being produced; the Guide Cone - one cone number cooler; and the Guard Cone - one cone number hotter than the Firing Cone.

These cones need to be set deep in the kiln, yet should be visible through the bung hole.

When the Guide Cone starts to bend, the ware is approaching maturity.

The bending of the Firing Cone indicates that the firing is at its correct stage. If the Guard Cone has bent, the firing has passed its best time-temperature window.

A great option for those wanting hand decorated tiles for their homes!

Update your kitchen, bathroom, laundry, fireplace. Create a feature wall or even an outdoor table!

Paints easily with underglazes then add a coat of clear gloss, or use assorted earthenware glazes to create your own designs.

Great for kids activities during the holidays, have them make up a sign for their bedroom, the garden or the family pet!
